**BASIC-ABSTRACT:**

The method of packaging particulate material involves having the particulate material contained in a pouch (10) having a closed end. The pouch has a labyrinth seal at or adjacent to the closed end of the pouch, and the pouch is filled to a desired capacity and then sealed at or adjacent to the open end of the pouch.

The pouch may have an open end prior to the filling of the pouch, and the open end of the pouch may be designed to be heat sealed. This labyrinth seal may then be formed by a first seal (11) having one or more apertures (12,13) in it and a second seal (15) extending across the pouch having one or more apertures (16) off set from those in the first seal.

USE/ADVANTAGE - It is possible to provide a more secure load of particulate material stored within multi-ply sacks. The air will escape under constant pressure from the pallet load and through the semi-porous bottom patch and other construction vents.
